### Description

The Search for Resources module allows users to search for aircraft, crew, equipment, overhead resources, and tracked supply resources by providing a resource name. Screen access is from the 'Resource' option on the menu bar.

Wildcard searches are permitted by placing an asterisk (\*) before and/or after a name. Users may narrow their search by providing the resource's home dispatch, provider and/or current dispatch. The search results include all resources that meet the criteria. Users can search for resources even if they are not managed by their dispatch center and are not assigned to one of their incidents.

The Search for Resources module is related to the Request Status, Incident Status, and Incident Resources modules.
